

easYview series

STANDARDIZE YOUR POWER SYSTEM VISUALIZATION

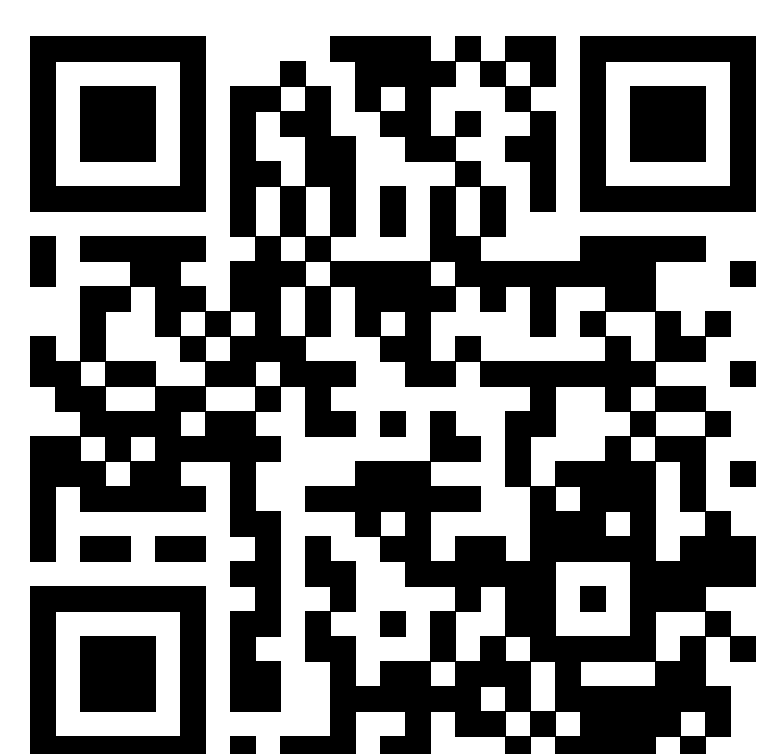

Woodward's easYview is a series of visualization touch-panels designed for single or system level visualization. It is purpose built to visualize a genset fleet controlled by Woodward power management controllers yet versatile enough to enable project specific customizations. While the miniSCADA mode is carefully designed for operation and maintenance of your genset fleet, the remoteHMI mode enables detailed connection to single controllers making easYview equally suitable for commissioning and troubleshooting. Designed with platform concept, easYview allows genset packagers, panels builders, and system integrators to standardize on a single visualization solution with minimum to no engineering effort to fit a wide variety of projects.

OPERATION MODES

- > All in one – hardware comes prepared with software licenses
- > Purpose-built to minimize engineering effort
- > Two built-in operation modes
 - > remoteHMI – detailed connection to single controllers
 - > miniSCADA – system level overview for genset fleet
- > Ruggedized design to fit harsh environments (-20°C – 60°C)
